EXPERIENCE

Software Engineer

InformMe GMBH

 Jan 2025 – Dec 2025  Germany (On Site)

- Participate in the migration phase from single tenant to multi tenant architecture.
- Work on all project aspects.
- Be part of the architectural design process and user stories.
- Add some best practices like pre-commits and PR reviews.
- Pair programming with colleagues for faster and ready to deliver tasks.

Software Engineer (freelance)

Pflegia

 Dec 2023 – May 2024  Germany (Remote)

- Work on all the project parts (dashboard, candidate and backend).
- Link website to segment to GA4 (google analytics).
- Prepare template emails on sendgrid.
- Generate CV using docxtemplater.
- Implement A/B tests experiments using posthog.
- Add components to Storybook.

Fullstack Developer

Regiondo/Infinity

 May 2022 – Nov 2023  Germany (Remote)

- Build a new POS for booking functionality from scratch.
- Expose the POS as a web component.
- Build a Backend For Frontend (BFF) following the hexagonal architecture (connect to services).
- Work with the DevOps team to deploy the project.
- Use internal packages (auth, auto-generate open api client...).
- Document every step in the Confluence workspace.

Fullstack Developer

BWM/Wssel

 August 2019 – November 2021  KSA (Remote)

- Develop a cross-platform app that help in learning new languages.
- Contribute to preparing to the sprint plan.
- Fix bugs and add new features to the mobile apps: Customer, Store and Driver.
- Been a major part in the migration process of the dashboard admin website to React.
- Took leadership (Senior Software Engineer) over the driver app.

OBJECTIVES

Innovative Software Developer with proven track record of delivering high-quality, scalable solutions and a strong focus on user-centered design. Passionate about problem-solving and eager to contribute to dynamic development teams.

SKILLS

Hard working Curious Team-player

React VueJs React Native React Admin
Storybook Next.js Nuxt TypeScript
JavaScript NodeJS/NestJS Bun/Hono
Docxtemplater/ILovePDF MJML GraphQL
Firebase RabbitMQ Redis.io Docker
SQL/NoSQL TypeORM/DrizzleORM
DynamoDB PostgreSQL AWS S3
AWS Lambda Git/Github/GitLab Jira
Bitbucket CI/CD Github Actions
A/B tests(posthog) Confluence

LANGUAGES

Arabic, English, French.

EDUCATION

Software Engineer

FST University

 2017 – 2019

Pre-Engineering School

FST University

 2015 – 2016

INTERESTS

Sports

Love to play football and ping pong.

Activities

Blogging (check my **Blog** ), Reading...

Q: what was the most challenging project you worked on ?

A: One project I'm particularly proud of was improving the performance and user experience of an image-processing

At the time, we had a feature where customers uploaded their signatures as images. The images were sent to our backend, where the solution worked, I identified a potential scalability issue: image processing is CPU-intensive, and as usage grew, it became a bottleneck.

I proposed a different architecture that would offload this work from the application server. Using Amazon S3 pre-signed URLs to store images on S3, eliminating the need for the backend to handle file transfers. I then used AWS Lambda to process and resize the images. This new backend, improved scalability, and aligned the solution with cloud-native best practices.

To further improve the user experience in the dashboard, I implemented a short-polling mechanism on the frontend to check for image availability. Additionally, I added a loading indicator to show the image is being processed, thus, display a loading indicator, and automatically show the image as soon as it was processed and available. This gave users a more responsive experience.

The biggest challenge was the timeline. We had a client review scheduled in just two days, and I had never worked with AWS before. I quickly built a proof of concept, tested the end-to-end flow, and successfully deployed it to our staging environment before the deadline.

The client demo went very well, and they were particularly pleased with the smoother upload experience. More importantly, the new architecture resolved the performance bottleneck before reaching production scale. For me, this project was a great example of proactively identifying and delivering a solution that improved both system performance and user experience.

Q: what was the best achievements in a job ?

A: During my time with the company, I contributed to a platform that achieved significant scale and growth. The business grew from serving over 500,000 customers, demonstrating both strong market adoption and operational excellence. To support this growth, I led the onboarding of 1,000 franchise partners, creating greater opportunities for merchants and increasing service availability across multiple markets. I also managed a delivery ecosystem of over 6,000 drivers, enabling reliable, efficient, and timely order fulfillment at scale. Being part of a team with experience in building and maintaining systems that support high-volume transactions, large user bases, and complex integrations was a great achievement.

Q: What are you looking for in your next job ?

A: For my next role, I'm looking for more than just a place where I receive requirements, build features, and move on to the next task. I want to be invested in the product and its users.

What excites me most is working on a product where I can understand the customer problems firsthand, think through solutions, and then simply implementing them. I enjoy collaborating with product managers, designers, and engineers to identify opportunities to create real value.

I'm particularly motivated by environments where engineers have ownership, can influence product decisions, and are passionate about a product I genuinely care about, where I can combine technical execution with product thinking to help build exceptional user experiences.
